

MVP - GxP Document + Training Control Hub

A lightweight eQMS core that covers the two must-haves every early biotech needs before audits or partner diligence: controlled documents and proof of training. It beats spreadsheets and folders, costs a fraction of Veeva, and is deployable in days.

What it solves on day one

- One source of truth for SOPs, policies, work instructions, forms.
- Draft to review to approval with versioning and full audit trail.
- Read-and-understood tracking and training matrices by role.
- Simple change control with impact assessment and due dates.
- Instant “Audit Pack” exports with signatures and training evidence.
- Role-based permissions and clean evidence for investors and QA.

Scope for v1 (4 weeks of build)

1. Documents

- Create, import, version, archive.
- Statuses: Draft, In review, Approved, Effective, Obsolete.
- Smart fields: owner, effective date, review cycle, related SOPs.
- Watermarked PDF rendition on approval.
- Hash-based, non-editable audit trail of actions.

2. E-signatures and approvals

- Sequential or parallel approval routes.
- 2-factor confirmation for signature events.
- Signature manifest attached to each approved file.

3. Training control

- Role profiles with required SOPs.
- Assignments auto-trigger on approval or role change.
- Read-and-understood, quiz optional for critical SOPs.
- Training matrix by person, team, role.
- Overdue and expiring alerts.

4. Change control (light)

- Change request record with reason, risk tick-box, linked SOPs.

- Impact list: retraining required, effective date, owner.
- Auto-notify assignees and retraining tasks on approval.

5. Audit readiness

- One-click “Audit Pack” ZIP: SOP PDFs, signature pages, training evidence, change log for a date range.
- Configurable header with company logo and required disclaimers.

6. Integrations and usability

- SSO with Microsoft 365 and Google Workspace.
- Import from SharePoint, Google Drive.
- Slack or Teams notifications for approvals and training due.
- QR code on the SOP cover page to open latest effective version.

7. Compliance posture

- “21 CFR Part 11 ready” features: secure e-sign, unique IDs, time-stamped audit trails, non-editable records, account lockout, session expiry, password policy.
- Validation: provide a lean validation pack template (URS, risk-based test cases, traceability matrix, release note).

Data model essentials

- User, Role, Permission.
- Document, DocumentVersion, ApprovalRoute, SignatureEvent, AuditEvent.
- TrainingRequirement (by role), TrainingAssignment, QuizResult.
- ChangeRequest with links to impacted DocumentVersions.

Key workflows

- New SOP: Author drafts → Submit for review → QA approves → System publishes effective PDF → Triggers training for mapped roles.
- Read-and-understood: User opens SOP → Short check or quiz → E-sign → Logged to training record and matrix.
- Change request: Submit CR → QA review → Approve → New version workflow + retraining auto-assigned.
- Audit pack: Select date range and scope → Export ZIP with indexes and manifests.

Permission model

- QA Admin: full control.

- Document Owner: create, revise, propose routes.
- Approver: review and sign.
- Employee: view effective docs, complete training.
- External auditor (optional read-only portal): view effective docs and evidence for defined scopes.

Reports to include in v1

- Training matrix by team with overdue list.
- SOP review cycle due in next 30, 60, 90 days.
- Change requests by status and turnaround time.
- Signature completeness per document set.
